

Build with Swytchcode :: Participant Information

Welcome to the **Build with Swytchcode** Buildathon! We are excited to see the AI solutions you create today. This document contains all the essential information you need for a successful 8-hour build session.

Step 1: Select Your Track (Mandatory)

Before beginning, every participant must select their preferred problem track.

- Track Selection Form: <https://forms.gle/DZz8fzQh8PNxcbPXA>

Important: Choose your track carefully. Once submitted, your track cannot be changed during the event.

Event Logistics

- **Event:** Build with Swytchcode
- **Format:** 8-Hour Offline Buildathon (**Solo Participation**)
Date: 9 August 2026
- **Time:** 9:00 AM – 5:00 PM
- **Venue:** Paytm Office, Noida
- **Address:** One Skymark, Tower-D, Plot no H-10 B, Sector 98, Noida

Event Schedule

Time	Session	Key Activities
9:00 – 9:50 AM	Registration	Check-in, verification, seating, and technical setup.
9:50 – 10:15 AM	Opening Session	Introduction to Swytchcode APIs, problem statements, and rules.

Time	Session	Key Activities
10:15 AM – 12:50 PM	Build Session I	Development begins with active floor mentorship.
12:50 – 1:00 PM	Check-in	Progress updates and blocker resolution.
1:00 – 1:40 PM	Lunch Break	Networking and lunch for all participants.
1:40 – 3:30 PM	Build Session II	Final development and mentor evaluation phase.
3:30 PM	Deadline	Final project submission on Commudle.
3:30 – 3:45 PM	Shortlisting	Score consolidation to select Top 7–10 finalists.
3:50 – 4:20 PM	Final Jury Round	2.5-minute demo + 1.5-minute Q&A with the jury.
4:25 – 4:50 PM	Closing Ceremony	Winners, prizes, certificates, and group photographs.

Judging Criteria

Criteria	Weightage	Focus Area
Swytchcode API Integration	30%	Deep and effective use of Swytchcode APIs.
Technical Implementation	25%	Code quality, architecture, and complexity.
Innovation & Originality	20%	Uniqueness and creative problem-solving.

Criteria	Weightage	Focus Area
Functionality	10%	Completeness of the working prototype.
Real-World Impact	10%	Practical application and scalability.
UX & Presentation	5%	Design aesthetics and clarity of the pitch.

Evaluation Process

1. **Phase 1:** Build your solution with continuous mentor guidance.
2. **Phase 2:** Mentors evaluate your project and recommend the best performers.
3. **Phase 3:** Based on mentor scores, the **Top 7–10 participants** are shortlisted.
4. **Phase 4:** Finalists present a **4-minute live demo** (2.5-min demo + 1.5-min Q&A) before the jury.
5. **Phase 5:** Jury evaluation and announcement of winners.

Problem Statement Tracks

Each track focuses on building **AI Agents** using **Swytchcode's production-ready APIs**.

Track 1 – AI Customer Support Knowledge Agent

Problem Statements: Answer support emails, search company knowledge, draft replies, create engineering tickets, and send customer updates.

Objective: Build an AI agent that can understand customer issues, retrieve relevant knowledge, coordinate with internal teams, and automate the complete support resolution workflow.

Integrations: Gmail, Notion, Jira, Resend, GitHub.

Track 2 – AI Meeting & Follow - up Assistant

Problem Statements: Schedule meetings, generate agendas, summarize Zoom calls, extract action items, and send follow-up emails

Objective: Build an AI assistant that automates the complete meeting lifecycle, including scheduling, agenda creation, meeting summarization, action-item extraction, and follow-up

communication.

Integrations: Google Calendar, Zoom, Gmail, Notion, Resend.

Track 3 – AI DevOps & Deployment Agent

Problem Statement: Analyze GitHub activity, create Jira issues, trigger Netlify deployments, and generate incident or release reports.

Objective: Build an AI agent that monitors engineering activity, creates and manages issues, triggers deployments, and generates incident or release reports.

Integrations: GitHub, Jira, Netlify, Notion.

Track 4 – AI Executive Productivity Assistant

Problem Statement: Prioritize emails, manage calendar conflicts, maintain executive notes, prepare daily briefings, and send reminders.

Objective: Build an AI assistant that can understand priorities and context to proactively manage an executive's daily communications, schedule, information, and follow-ups.

Integrations: Gmail, Google Calendar, Notion, Resend.

Participant Note: Participants may use the free tiers/trial versions of the listed platforms for building and demonstrating their POC. Teams are not required to purchase paid subscriptions. Participants should create their own accounts/workspaces and use test or dummy data while connecting the required services through Swytchcode APIs.

Submission Requirements

Submit your project here:

<https://www.commudle.com/builds/create?campaign=BuildWithSwtchcode>

- **GitHub Repository** (Public)
- **README Documentation**
- **Architecture Diagram**
- **Demo Video** (*Optional*)
- **LinkedIn or X Post** mentioning [Swtchcode](#) and [KNOTiC](#)
